

TASK - 3

Prompting for Task Automation

Automating note summarisation using iteratively refined prompts

This task demonstrates how prompt engineering can automate a repetitive cognitive task — converting unstructured notes into concise, structured bullet points. The prompt was refined through iteration to improve consistency, brevity, and clarity across diverse input topics.

Automation Prompt

Final Prompt: Summarise the given notes into clear and simple bullet points. Keep the summary short, easy to understand, and include only the most important information.

Input / Output Examples

Example 01 — Java Programming

Input Notes	Java is a programming language used for software development. It is platform-independent, object-oriented, and widely used in web applications, Android development, and enterprise systems.
Output Summary	• Java is a programming language used for software development. • It is platform-independent and object-oriented. • Java is widely used in web applications, Android apps, and enterprise systems.

Example 02 — Climate Change

Input Notes	Climate change refers to long-term shifts in temperatures and weather patterns. Human activities such as burning fossil fuels and deforestation contribute to climate change, which can cause rising temperatures, floods, and droughts.
Output Summary	• Climate change means long-term changes in temperature and weather. • Human activities like fossil fuel burning and deforestation are key contributors. • Effects include rising temperatures, floods, and droughts.

Example 03 — Fitness & Exercise

Input Notes	Regular exercise improves physical and mental health. Activities such as walking, stretching, and jogging help maintain fitness, reduce stress, and improve sleep quality.
Output Summary	• Regular exercise improves both physical and mental health. • Walking, stretching, and jogging are effective fitness activities. • Exercise helps reduce stress and improve sleep quality.

Prompt Iteration & Refinement

Iteration	Prompt Version	Issue Observed	Refinement Applied
v1.0	"Summarise these notes."	Output too long	Added length constraint
v1.1	"Summarise in bullet points."	Bullets were still verbose	Added clear and instruction
v1.2 (Final)	"Summarise in clear, simple points."	Include only important information.	Output became consistent

Key Outcomes

- The refined prompt produced **consistent, 3-point summaries** across all three input topics.
- Outputs were shorter, clearer, and free of unnecessary repetition after each iteration.
- The automation is **topic-agnostic** — the same prompt works reliably on any informational text.

- Prompt iteration is a critical discipline: small wording changes can have significant effects on output quality.

Conclusion: This task demonstrates that prompt engineering can effectively automate routine knowledge work. By iteratively refining the prompt — constraining length, specifying format, and eliminating ambiguity — it is possible to achieve reliable, production-quality summarisation without any code or custom tooling.
